Employee Training Dashboard
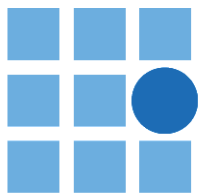

The Challenge

Heli, Inc. is a helicopter services provider based in Canada. The company's pilots undergo a number of trainings at regular intervals. The Operations Manager of the company wanted an automated way to monitor and track the training activity of the pilots.
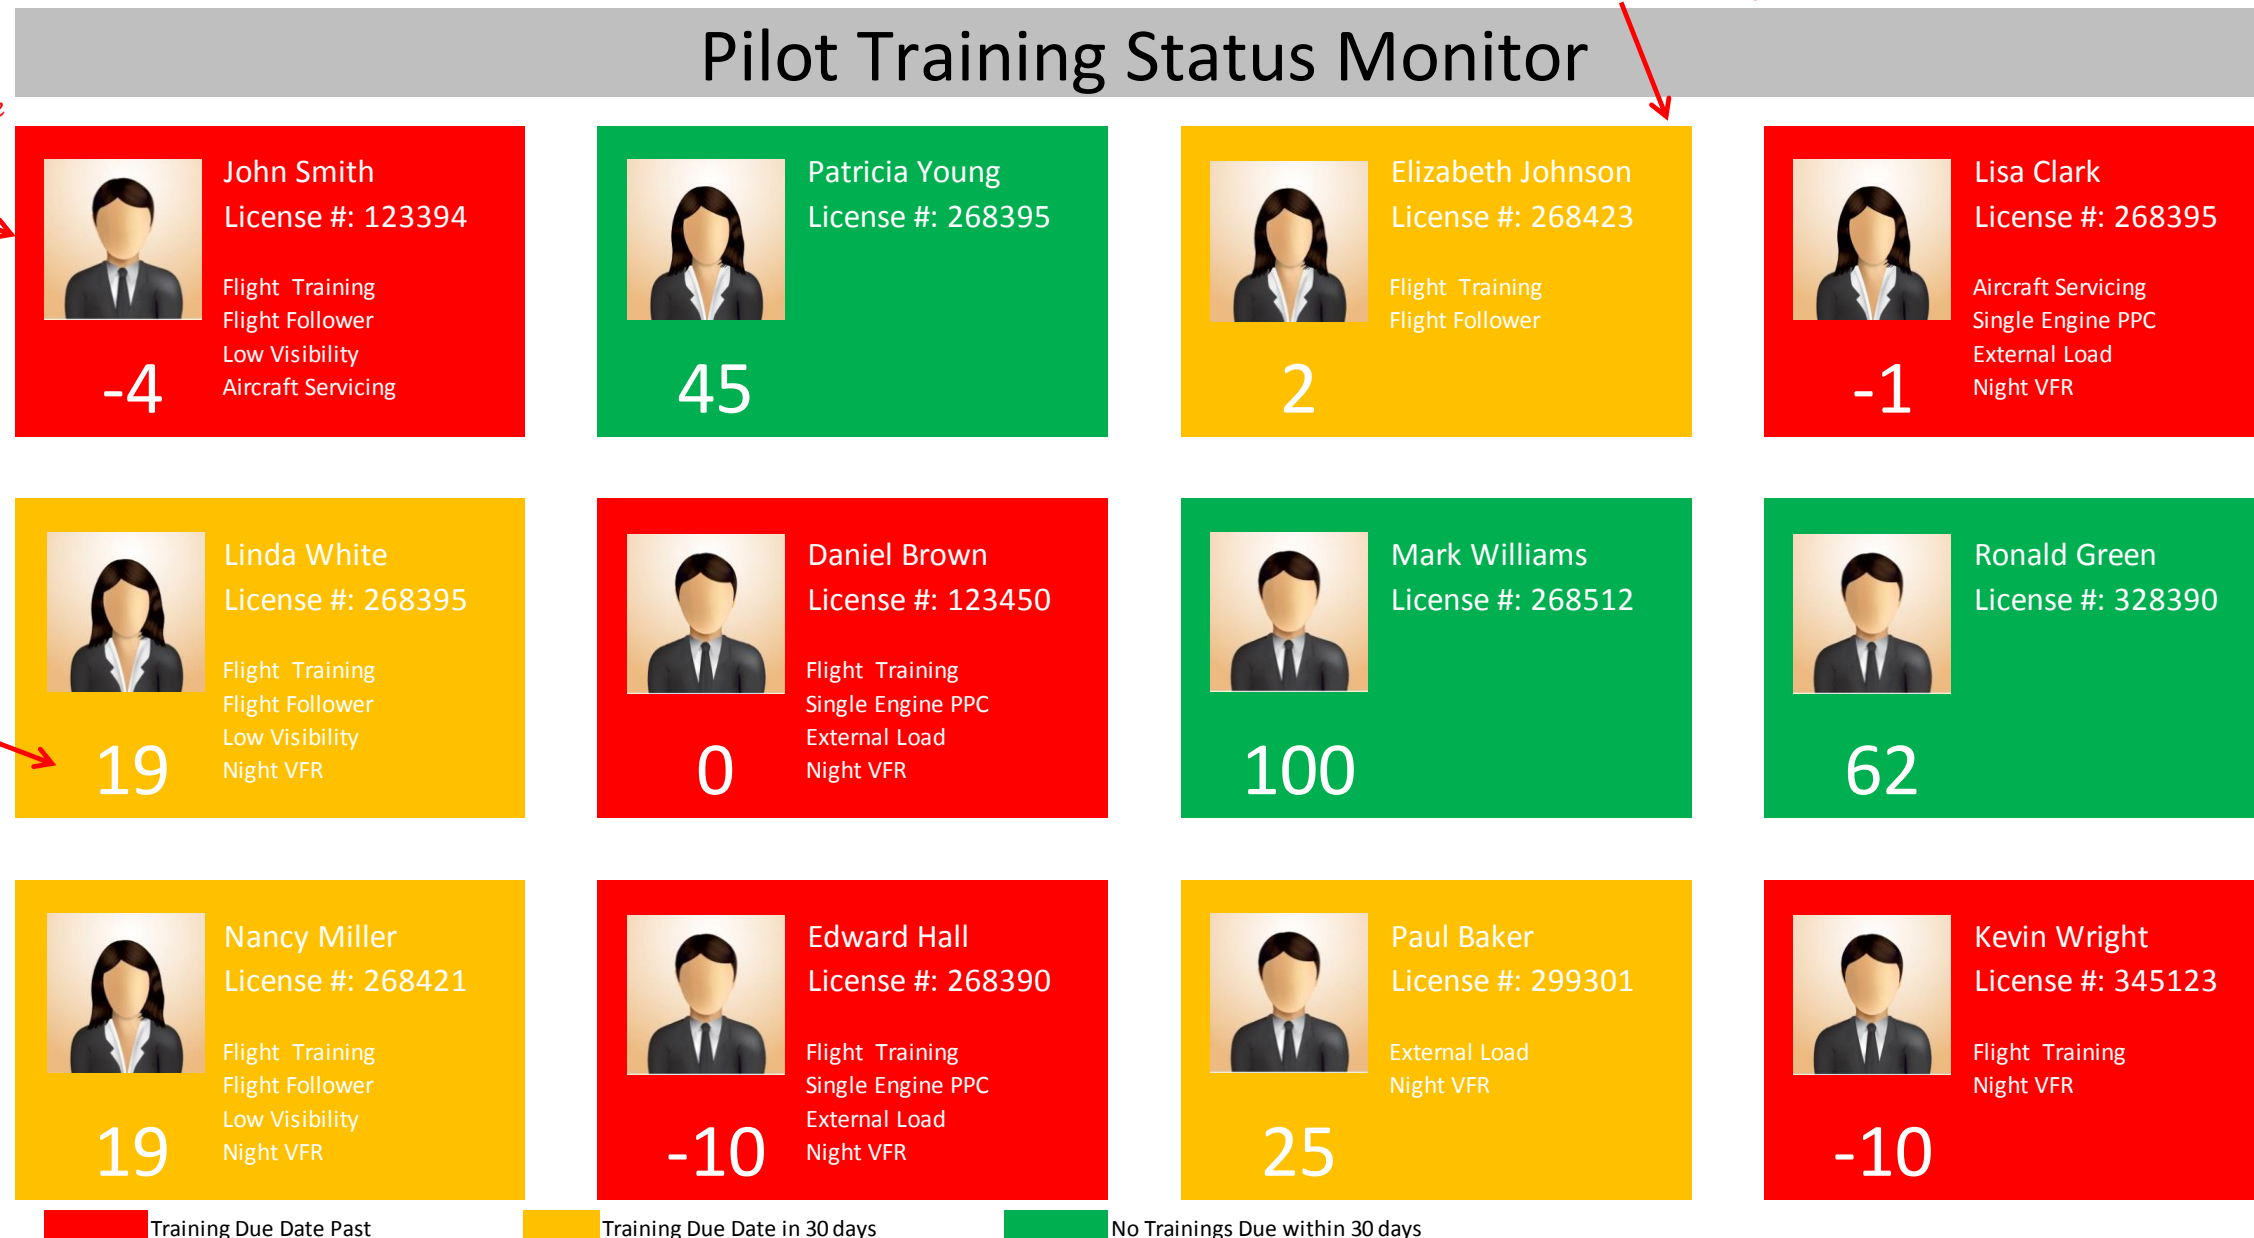

Impact

The tool provided the client an easy way to monitor and track the training activity of the pilots so that trainings are scheduled and conducted on time. This greatly increased operational efficiency of the client apart from the timely compliance with the safety standards and regulations.

Amber indicates that 1 or more trainings are due within 30 days

Our Solution

A comprehensive application with built-in automation for streamlining the pilot training process was built. It includes an intuitive dashboard, which offers a one-glance depiction of current training status for each of the pilots. An easy-to-use interface facilitates updation of training activity details, and pilot information. The application also sends email notifications automatically to the pilots as and when trainings are due.

Perceptive Analytics

Perceptive Analytics is a Data Analytics company, offering specialized services in Marketing Analytics, Data Visualization, Financial Modeling, Spreadsheet Modeling and Application Solutions. We serve large and medium sized companies in the US, India, Australia, Europe and Middle East.

We provide spreadsheet applications, data analysis, statistical modeling, simulation, dashboard design, cash flow analysis, financial modeling, and other services.
