

Radial Heatmap

Color intensity quickly reveals peak and low times

Each segment represents time of day

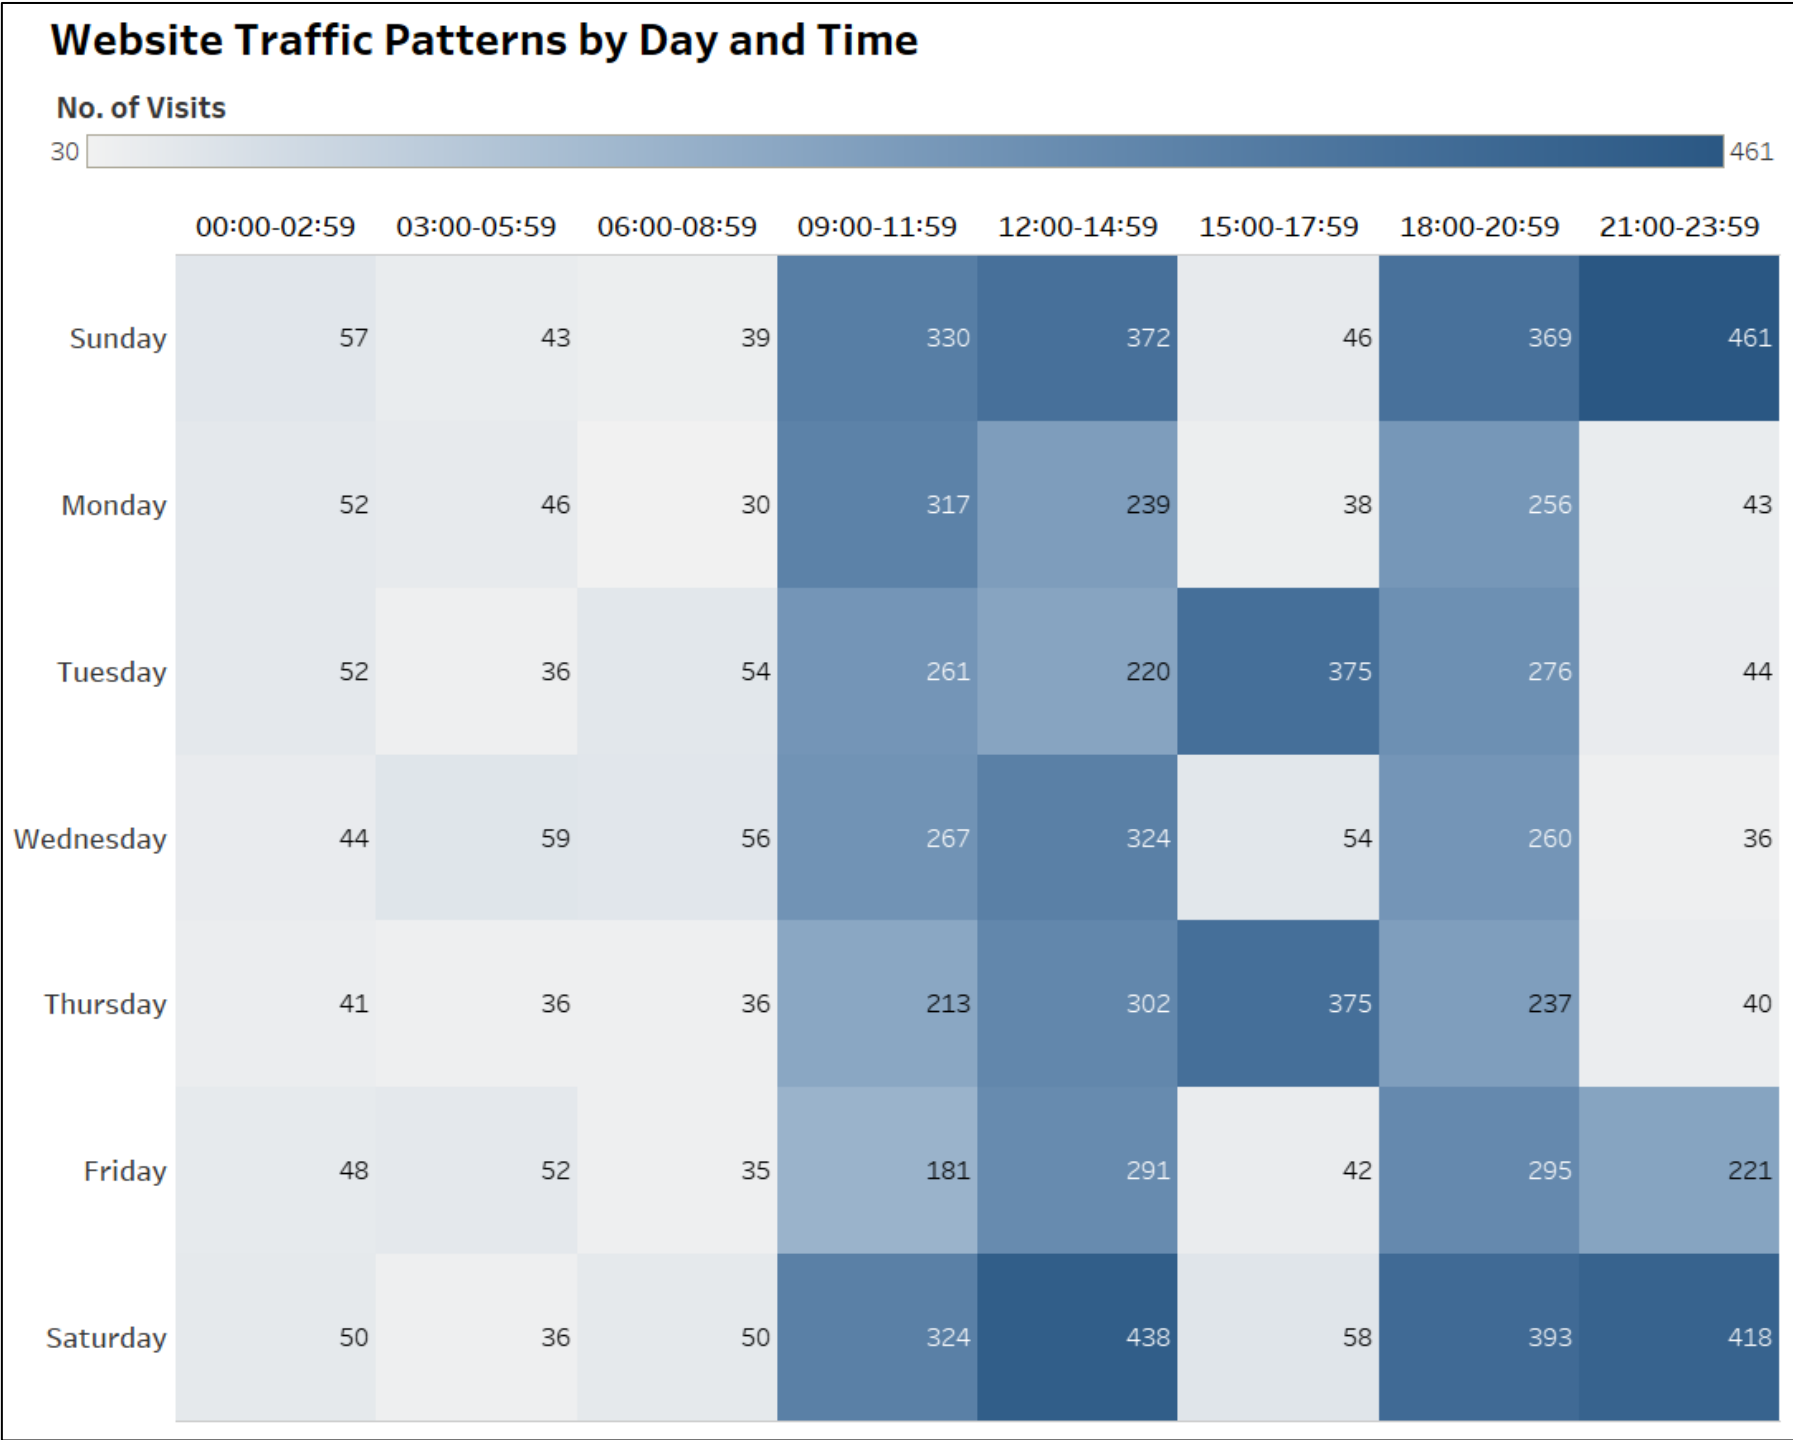

Each ring represents day of week

Circular layout makes time feel continuous

Regular Heatmap: Traditional Way

*Easy for exact lookups,
harder to spot repeating time patterns*

*Clean layout, but breaks continuity
between days*

Radial Heatmaps: Visualizing Time in Cycles

Radial heatmaps show time-based data in a circular layout that follows the natural cycle of days and hours. Rings represent days, segments show hours, making peak times and repeating patterns easy to spot.
